**Subject:** Chat System

Hello Team,

Our employees are starting to look for easier ways to communicate than email. I don't want them using some random externally hosted tool to pass our proprietary information. We need an in-house chat system. I have heard good things about XMPP from my counterparts at a few other firms and have gotten a POC going.

Now that it is up we need to get it connected to AD. Please add Active Directory authorization to the XMPP server on Loki so we can test out this new service. It should be ready for testing in an hour. That should give us some time to get the kinks out of the system and get proper administration in place.

I know our auditors will want to make sure this is setup to authenticate through AD. Please provide a short 1 page write up on what you deployed. Make sure you include proof that the system is working and we are handling Logins through Active Directory.

Thank you.

*John H.*
