**To:** IT Staff

**Subject:** AD Security Policies

He told me Microsoft Active Directory supports methods for enforcing policy and suggested I task you with ensuring &amp;amp;amp;amp;amp;amp;amp;quot;the domain GPO takes into account AD security best practices&amp;amp;amp;amp;amp;amp;amp;quot;.

His recommendation was a GPO that meets some of the most stringent requirements. Please create a GPO as follows:
• Enable domain level password complexity requirements
• Enforce password history (at least 12 months)
• Define a maximum password age (60 days)
• Define a minimum password length (8 characters)
• Rename the Administrator and Guest accounts
• Enable the "Do Not Require CTRL+ALT+DEL" logon setting
• Create a legal disclaimer logon banner presented at login (your discretion on text)
• Disable Administrative Shares (HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\lanmanserver\parameters)

You are to save the generated HTML report from the Management Console and upload to the Blue Team Portal for my review. He mentioned Microsoft should have tools available to export the report so I can confirm this is done.

Thank you.
